**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments filed 19 November 2009 have been fully considered but they are not persuasive.
2. In response to the applicant's argument that no motivation exists to modify Blank in view of Flexman, it is noted that Blank discloses a superabsorbent material for a variety of applications, including food, as disclosed in column 1, lines 25-32. The use of superabsorbent material in food packaging to absorb liquids is well-known in the art. Therefore, one skilled in the art would be motivated to provide the superabsorbent material of Blank with an antibacterial in the form of lactide, as taught by Flexman.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
4. Claims 3-5, 9-11, 15-17, 19, 21, and 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blank et al. (5,045,322) in view of Flexman et al. (5,498,650).
5. Blank discloses all aspects of the claimed invention with the exception of the non-acidic compound being a cyclic lactide. Blank discloses a superabsorbent material comprising a superabsorbent polymer, as described in column 1, lines 15-22. The superabsorbent material contains an antimicrobial agent to control odors, as disclosed

in column 1, lines 15-22. The antimicrobial agent homogenously mixed with the superabsorbent material, and is present in the amount of 5-10% by weight, as disclosed in column 8, Examples I and II. The superabsorbent material is for use in hygiene products such as diapers and sanitary napkins, as disclosed in column 7, lines 61-64.

6. Flexman teaches the use of lactides, which are a cyclic lactide, as an antimicrobial agent, as disclosed in column 1, lines 65-67. It would therefore be obvious to one of ordinary skill in the art at the time of invention to provide the superabsorbent material of Blank with lactide, as taught by Flexman, to provide the predictable result of imparting antimicrobial properties to the superabsorbent material.

#### ***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
